Design Selected for Jefferson-facing Barrier Wall

An aesthetic design has been selected for the Jefferson-facing barrier wall that will be constructed as part of the project's US Port of Entry (POE). The Jefferson wall is an opaque, 8-foot high, non-climbable security wall that will be located within the 85-100 foot-wide landscaped perimeter of the US POE. This green space will provide public benefit with native pollinator-positive plantings, and a public multi-use path that will connect

Campbell and Green Streets. Learn more about the wall and its design by viewing our interview with the designer for the wall below. Read the spotlight story here.
